

## Reports by Parish Ministries

---

### Accessibility

*Respectfully submitted Henry Jeens*

Significant progress has been made in the last year on the accessibility project. In October 2025 we provided an update on the proposed design that has been developed by the architects (Lynch and Comisso) as well as expert input from within and outside the parish. In October we also branded the project as FAITHLiFT – aligning with the vision to make our building accessible to everyone. Further information can be seen, including drawings, visualizations and the presentation in this link [Accessibility at St. Olave's – St. Olave's Anglican Church](#). This design provides the foundation to move on to the next step which is starting to secure funding for the works. Once sufficient funds are secured detailed design will commence. Following this we can secure a contractor. This will enable us to obtain final approval from both the parish and diocese enabling construction to begin. Our plan is that with fundraising underway we will commence detail design in Spring 2026 with construction starting in 2027.
